PRAIRIE ISLAND NUCLEAR GENERATING PLANT
Docket Nos. 50-282 License Nos. DPR-42
50-306 DPR-60

Schedule for Completion of
Control Room Modifications Relating to the
Requirements of NUREG-0737 Supplement No. 1

Reference: Letter dated July 31, 1992, from " M Parker (NSP) to US Nuclear
Regulatory Commission, "Schedule for Completion of Control Room
Modifications Relating to the Requirements of NUREG-0737
Supplement No. 1."

The purpose of this letter is to revise the schedule as described in the
referenced letter. That letter provided a schedule for all of the remaining
modifications for the control room relating to the requirements of NUREG-0737,
Supplement No. 1.

One of the planned modifications is the reconfiguration of Control Room
'G'panel. This panel provides controls for the safeguards diesel generators
and their associated 4160 volt buses. We plan to modify this panel during the
upcoming two unit outage which has been scheduled in order to make the tie-ins
for the new safeguards diesel generators being added as part of the Station
Blackout/Electrical Safeguards Upgrade Project. The two unit outage has been
rescheduled from February 1992 (coinciding with Unit 2, Cycle 15 refueling) to
November 1992 (coinciding with Unit 1, Cycle 16 refueling). This is the only
change in the schedule as presented in the referenced letter.
