Gentlemen:

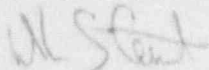

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNITS 1 AND 2
RESPONSE TO INSPECTION REPORT 50-338&339/91-25
SYSTEMATIC ASSESSMENT OF LICENSEE PERFORMANCE

Virginia Electric and Power Company has reviewed the initial report, dated January 13, 1992, on the Systematic Assessment of Licensee Performance (SALP) for the period of September 1, 1990 through November 2, 1991 for North Anna Power Station and has no specific comments. As we have noted in the past, we consider the SALP process to be a very useful and important tool for both the NRC and Virginia Electric and Power Company in assessing and improving performance and safety at our nuclear stations.

The recognition of the strengths noted in the report was appreciated, and we are committed to building upon those strengths. Also, we will make every effort to strengthen our performance in those areas where challenges were identified. In the area of Plant Operations, efforts are underway to increase operator awareness, assess and improve work practices, improve procedure quality and provide additional training to improve human performance. In the area of Engineering/Technical Support, Engineering management will continue to focus on proper implementation of design modifications. Procedures affected by modifications will be upgraded in a timely manner. In the area of Maintenance/Surveillance, we are pleased with the many improvements that were noted in the SALP report. The station surveillance program implementation will receive additional review and management attention in areas where improvement can be realized. It is our intention to provide periodic status to you regarding our progress in these areas.

Should you have any questions or require additional information, please contact us.

Very truly yours,

W. L. Stewart
Senior Vice President - Nuclear
