OPERATIONS DEPARTMENT STANDING ORDER

---

TITLE: POST TRIP EVALUATION\*

PROCEDURE NO. 23

---

1.0 PURPOSE:

The purpose of this procedure is to collect pertinent information concerning a reactor scram, to analyze the scram, to assure the plant responded as designed, and to assure a safe and timely return to power operation.

2.0 APPLICABILITY:

This procedure is used to evaluate the causes of unplanned plant shutdowns.

3.0 REFERENCES:

1. FSAR
2. Cycle Reload Analysis
3. Technical Specification

4.0 DEFINITIONS:

- 4.1 Data Sheet 1 - A summary of plant operating conditions before and during the transient.
- 4.2 Data Sheet 2 - A log for deficiencies noted during the event and subsequent analysis.
- 4.3 Cause - The origin of an event (usually an equipment malfunction, procedural, or personnel error).

5.0 RESPONSIBILITIES:

5.1 Shift Technical Advisor

Following a reactor scram, complete Data Sheet 1 to the extent possible. This should not interfere with his primary responsibilities and in fact may aid him in diagnosing potential plant problems.

5.2 On-Shift Operators

Aid Shift Technical Advisor in completing Data Sheet 1, not to interfere with their primary responsibility of controlling the plant.

5.3 Shift Supervisor

1. Ensure this standing order is implemented.
2. Ensure plant personnel attend post-trip briefing.

Rev. No. 0

Date 02/07/84

TITLE: POST TRIP EVALUATION\*

---

PROCEDURE NO. 23

3. Aid Operations Superintendent in the transient analysis.
- 5.4 Operations Superintendent or designated SRO.
  1. Analyze data collected to ensure that the plant responded as designed.
  2. Ensure deficient items are noted and corrective actions initiated.
- 5.5 Plant Operations Review Committee
  1. Review all unanticipated reactor trips prior to restart where the cause is:
    - a. Unknown or
    - b. Safety related equipment functioned in an abnormal manner and the cause is undetermined or deficiencies remain unresolved.
    - c. Abnormal radiation or chemistry occurred.
  2. Recommends to the Resident Manager or designated alternate course of action to be taken in cases a, b, and c above.
- 5.6 The Resident Manager or his designated alternate makes the decision to restart the reactor.

6.0 SPECIAL INSTRUCTIONS/REQUIREMENTS:

7.0 PROCEDURE:

- 7.1 When a reactor scram occurs, the Shift Technical Advisor with the aid of plant operators shall complete Data Sheet 1. Any data not collected during the event should be obtained from records, computer printouts, or post trip logs.
- 7.2 The operating shift, when relieved from duty, shall conduct a post event critique. Any plant personnel who were involved in maintenance and testing related to the event shall attend the critique. The critique shall be documented on an Occurrence Report Critique Form per AP-8.2. Any system abnormalities, procedure inadequacies, equipment malfunctions shall be noted in Data Sheet 2. The critique form shall be attached to the scram report along with any written statements pertaining to the event.

TITLE: POST TRIP EVALUATION\*

PROCEDURE NO. 23

---

- 7.3 The Operations Superintendent or a designated SRO shall review the data collected following the event. He shall complete Data Sheet 2 for each significant material discrepancy found during the event. Generally, these should include major equipment failures such as failure to isolate, failure to initiate, and the like.
- 7.4 1. The Operations Superintendent or alternate shall review the data sheets and post event critique sheet. He shall write a brief summary of the event. Included will be recommendations for restart and any corrective actions required prior to restart.
2. If the post trip evaluations result in any of the following, the Plant Operations Review Committee shall analyze the event and determine corrective action required prior to restart.
- 7.4.2.1 The cause of the scram cannot be positively determined, or deficiencies remain unresolved.
- 7.4.2.2 Safety related equipment functioned in an abnormal manner and the cause is undetermined or deficiencies remain unresolved.
- 7.4.2.3 Chemistry results and/or radiation readings are not normal.
- 7.5 The Resident Manager or his designated alternate shall make the decision to restart.
- 7.6 The Operations Superintendent or alternate shall review the event and initiate any training that is appropriate to prevent reoccurrence.
- 7.7 This report shall be forwarded to Document Control Center for filing.
