Docket No. 50-336
B11269

Director of Nuclear Reactor Regulation
Attn: Mr. James R. Miller
Operating Reactors Branch #3
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Reference: W. G. Counsil letter to J. R. Miller, dated July 11, 1984.

Gentlemen:

Millstone Nuclear Power Station, Unit No. 2
Containment Venting at Power
NUREG-0737, Item II.E.4.2.7

Northeast Nuclear Energy Company (NNECO) provided information in the referenced submittal which justifies the position that the isolation logic for the Hydrogen Purge Valves at Millstone Unit No. 2 is adequate and modifications to the valves to close on a radiation signal are not warranted. Figure 3.1 of the reference was not reproduced in its entirety. As such, please find attached the Figure as it was intended to be submitted.

Please excuse any inconvenience that may have resulted.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY
