Docket Nos. 50-338
50-339
License Nos. NPF-4
NPF-7

Gentlemen:

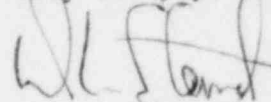

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNIT NOS. 1 AND 2
REACTOR VESSEL MATERIAL SURVEILLANCE TEST RESULTS

Per the requirements of 10 CFR 50, Appendix H, Reactor Vessel Material Surveillance Program Requirements, enclosed is one copy of the summary technical reports of the first capsule from the North Anna 1 and 2 reactor vessel surveillance program. Due to an administrative oversight, these reports were not submitted within the timeframe specified in 10 CFR 50, Appendix H (one year).

As a result of the evaluation of the first capsule of the reactor vessel surveillance program at North Anna 2, the pressure-temperature limits are being revised and the operating period for these new limits will be extended to 10 effective full power years. These changes are being submitted in the form of a amendment request and will be submitted by October, 1984.

The evaluation of the changes to the North Anna 1 pressure-temperature limits and the operating period has not been completed. This evaluation should be completed by December, 1984 and the changes necessary will be submitted by February, 1985. The current pressure-temperature limits will remain bounded by the original five effective full power year curves.

Very truly yours,

W. L. Stewart
