Docket No. 50-267

Dear Mr. Johnson:

Enclosed, please find a revised copy of the thirty-second Startup Report for Fort St. Vrain Nuclear Generating Station, Unit No. 1. This report covers the period from May 23, 1984, through August 20, 1984, and is submitted in fulfillment of the requirements of Section 7.5.1a of the Fort St. Vrain Technical Specifications.

Sincerely,

J. W. Gahm
Manager, Nuclear Production

INITIAL APPROACH TO
POWER (B-SERIES)

INTERIM REPORT 32
Report for Period Ending August 20, 1984

Interim Report 21 covering the 90-day period from August 23, 1981, to November 22, 1981, reported the completion of the majority of tests at 100% of plant load. Significant power levels or appropriate plant conditions required for remaining tests have not been achieved since then, however. At present, the reactor is shutdown for an investigation of six control rod pairs that failed to automatically insert upon actuation of the Plant Protective System Scram Logic. No further initial approach to power tests were performed during the 90-day period ending August 20, 1984.

Future interim reports will report the results of any startup tests which still remain in the "open" status.
