Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNIT NOS. 1 AND 2
PROPOSED TECHNICAL SPECIFICATION CHANGES

Pursuant to 10 CFR 50.90, the Virginia Electric and Power Company requests an amendment, in the form of changes to the Technical Specifications, to Operating License Nos. NPF-4 and NPF-7 for North Anna Unit Nos. 1 and 2.

The proposed Technical Specification changes will revise Technical Specification 3.0.5. The specific changes will be to take action within 2 hours when a system, subsystem, train, component or device and its corresponding normal or emergency power sources are inoperable and all its redundant systems, subsystems, trains, components and devices are inoperable. The action taken so the applicable LCO does not apply is to place the unit in:

1. At least HOT STANDBY within the next 6 hours,
2. At least HOT SHUTDOWN within the following 6 hours, and
3. At least COLD SHUTDOWN within the subsequent 24 hours.

These proposed Technical Specifications are requested because the current Technical Specifications are more restrictive than other Technical Specification LCO's for similar situations where 6 hours were allowed to be in at least HOT STANDBY. The changes will allow greater operating flexibility and provide additional time for repairs prior to having to shutdown the unit. The proposed Technical Specification changes for North Anna Unit No. 1 are provided in Attachment 1. The proposed Technical Specification changes for North Anna Unit No. 2 are provided in Attachment 2. A discussion of the proposed Technical Specification changes is provided in Attachment 3.
