Mr. Harold Denton, Director
Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Denton:

The newspapers are saying that fuel-load at Fermi 2 Nuclear Plant (five miles from my home) will be next week, yet I understand that you have not yet replied to the Safe Energy ~~of~~ Coalition of Michigan and Great Lakes Energy Alliance concerns regarding computer systems, as-built designs, radwaste processing system, fire-protection, and the Mark I reactor.

I fail to see that it's possible to grant Detroit Edison the low power fuel load licence with these concerns, listed in SECOM's petition 2-206, have not been resolved.

The democratic process is ill-served when a life-or-death commission such as the NRC says one thing and does another.

Please do not allow a license to be issued before fully and completely investigating the inadequacies and then seeing that they are resolved. Thank you.
