ABSTRACT (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines. (16))

During shutdown operation, operators were unable to obtain indication of auxiliary feed flow to the B Steam Generator (S/G) from the B AFW pump. AFW flow to the B S/G would have been available from the C AFW pump in modes requiring Aux F.W. Subsequent investigation revealed that the Stem had separated from the plug on the auxiliary feedwater valve that controls flow to the B S/G from the B pump. This equipment was not required operable under this condition. This event has not been determined to be reportable under the requirements of 10CFR 50.73 but is being submitted as a preliminary notification due to the 30 day time limit from event date. Investigation as to cause and reportability is continuing and a follow up report will be submitted.
