Docket No. 50-289SP
(Restart)

LICENSEE'S ANSWER TO AAMODTS' MOTION
TO ADDRESS FALSE STATEMENTS IN RESPONSES
TO AAMODT MOTION OF JANUARY 15, 1985

On January 15, 1985, Norman and Marjorie Aamodt filed with the Commission a Motion for Reconsideration of Commission Order CLI-84-22 and Opening of a Hearing. Licensee and the NRC Staff filed responses on January 25, 1985 and February 4, 1985, respectively.^{1/} On March 7, 1985, Aamodts served Licensee with

^{1/} Licensee's Response to Aamodt Motion for Reconsideration of Commission Order CLI-84-22 and Opening of a Hearing (January 25, 1985) (hereinafter referred to as "Licensee's Response"); NRC Staff Reply to Aamodt Motion for Reconsideration of Commission Order CLI-84-22 and Opening of a Hearing (February 4, 1985).

DS03

"Motions to Address False Statements in Response to Aamodt Motion of January 15, 1985" (hereinafter referred to as "Aamodts' Reply"). The Aamodts' Reply was amended on March 11, 1985, substituting five pages and adding an October 1, 1980 interview of Thomas Gerusky as an exhibit. Errata, Aamodt Motion March 6, 1985 (March 11, 1985). Licensee herein responds to the Aamodts' Reply, as amended, addressing only that facet of the Aamodts' Reply relating to Licensee's provision of information to the Commonwealth on March 28, 1979;^{2/} Licensee assumes the NRC Staff will respond to the Aamodts' other charges which directly concern the Staff.

The Aamodts' Reply is inaccurate. The Aamodts state on page 5 that Licensee wrongly claimed Thomas Gerusky had "'corrected' his May 3, 1979 testimony on which Gamble had depended for his conclusion that TMI personnel had lied concerning

^{2/} In the Aamodts' "Motion for Reconsideration of Commission Order CLI-84-22 and Opening of a Hearing" (Jan. 15, 1985), the Aamodts claimed that TMI personnel discounted projected releases of 10 R/hr over Goldsboro by claiming, contrary to fact, that surveillance teams had been dispatched and had verified that a significant release had not occurred. The Aamodts referred to a draft of a section of NUREG-0760, which had been attached to the recent testimony of David Gamble in the remanded restart proceeding; that draft in turn referred to a May 3, 1979 NRC interview of Thomas Gerusky. Mr. Gerusky's interview suggested that offsite measurements at Goldsboro had been reported prior to 8:00 a.m. and used to discount the Goldsboro projection, whereas other evidence indicated that a reading was not taken at Goldsboro until about 8:30 a.m.

offsite surveillance of a plume during the early hours of the accident." The Aamodts are wrong for several reasons.

First, Licensee did not state that Mr. Gerusky had "corrected"^{3/} his "testimony" -- a phrase that might connote formal transcript correction. Rather, Licensee indicated that the NRC had subsequently explored, in an October 1, 1980 interview of Mr. Gerusky, the substance and timing of communications between Licensee and the BRP concerning the Goldsboro dose rate projection.^{4/} Based on this interview and NUREG-0760's subsequent treatment of this subject, Licensee concluded that the matter discussed in the Aamodts' motion had been "clarified" long ago.

Second, Licensee is unaware of the basis for the Aamodts' assertion that David Gamble concluded TMI personnel had lied. See Aamodts' Reply at 5. The Aamodts apparently rely on early drafts of sections of NUREG-0760 (sections drafted prior to Mr. Gerusky's second interview) which the Aamodts refer to as the Gamble drafts and attach to their motions. Mr. Gamble, however, was not the author of these drafts. The drafts were merely

^{3/} The word "corrected" appears nowhere in Licensee's Response.

^{4/} The Aamodts also rebuke Licensee for allegedly not providing a specific citation to Mr. Gerusky's October 1, 1980 interview. Licensee, however, specifically cited pages 33-41 of that interview. Licensee's Response at 3. Moreover, Licensee attached the pages to its Response.

attachments to Mr. Gamble's recent testimony in the remanded restart proceeding, proffered solely to support his criticism that NUREG-0760 investigators had predrafted portions of that report and not for the truth of the matter asserted therein.

Third, the Aamodts misuse the Gerusky October 1980 interview. On page 7 of the Aamodts' Reply, the Aamodts quote portions of two answers from pages 39^{5/} and 41 of Mr. Gerusky's October 1, 1980 interview in an attempt to discredit Licensee's and the Staff's analyses. In selecting these quotations, the Aamodts ignore the parts of the transcript that contradict their position and which place the quoted portions in context.

Before giving the particular answers quoted in part by the Aamodts, Mr. Gerusky was questioned at some length on the substance of and sequence in which information concerning Goldsboro had been received:

Q Do you recall what was told you -- what specifically was told you which caused you to no longer give any credibility to the 10-R per hour reading? I'm talking about surveys. What surveys were made, for instance?

A Yeah, we were told that there were no onsite readings of any consequence, in that wind direction. We were also told that the containment pressure was still very, very low, and that this was designed -- that the calculation

^{5/} The Aamodts miscite page 59 as the location for the first quotation.

he was using was designed for containment -- for containment design pressure, instead of what the pressure really was. So the explanation that went along with this was that if we are following procedures, our procedure says if it's reading 800-R per hour at the dome monitor, this is what the dose rate downwind would be at design lead pressure. However, it's not at design lead pressure, so these numbers aren't real. However, we aren't going to take any chances. We are going to send a team over to check it out, and then we notify PEMA or Civil Defense to be prepared to evacuate people on the west shore.

* * * * *

[BY MR. GAMBLE]

Q So let me make sure I understand it. It is in this order. First you learned about the dome monitor reading, and then as they were performing the calculations, he talked about the pressure and those things, and then at the tail end of that conversation, you got the calculated reading. Is that the order?

A That's about what I remember.

Q All within this general conversation?

A Yes. And I was asking questions while all this was going on, Maggie was asking questions. "Do you have any people over there now monitoring?" "No, we are starting to send people over."

I was under the impression they were going to go over by helicopter, for some unknown reason. I don't believe they went over by helicopter. I thought there was a helicopter there

and they were going over by helicopter and get the readings. They got the readings very quickly. At least the time was going by so darned fast. When we got the word back that they didn't have any detectable activity over there, it apparently was a lot longer period of time than I had anticipated, early on, anyway.

BY MR. MOSELEY:

Q So there was action taken to notify PEMA after the first prediction?

A Yes.

Q And then some time elapsed before PEMA was called back and said --

A Yes, they have in their logs what that time was, and it appeared to be like an hour or something. But I don't remember.

BY MR. GAMBLE:

Q And was it the reading on the other side of the river that precipitated this second call to PEMA?

A Yes.

Q It wasn't an onsite reading, it was the actual reading.

A No, it was the actual reading from across the river saying they had found no detectable radiation across the river in Goldsboro or down in the general vicinity.

NRC Interview of Thomas Gerusky (Oct. 1, 1980) at 32-36.

Mr. Gerusky made it clear, therefore, that the Goldsboro projection was initially discredited on the basis of onsite

readings and the low containment pressure -- and not on the basis of offsite readings at Goldsboro. Mr. Gerusky was then questioned on the times at which information concerning Goldsboro was received. When the portions of Mr. Gerusky's responses which the Aamodts quote are read in context, it is evident Mr. Gerusky was responding that information on the Goldsboro projection and onsite measurements was received perhaps sometime between 7:30 and 8:00 and were reported to PEMA at that time, that the actual measurements at Goldsboro were subsequently received and reported in a second call to PEMA, and that the PEMA log indicated that the interval between the two calls may have been "an hour or something".^{6/} See NRC Interview of Thomas Gerusky (Oct. 1, 1980) at 37-41.

Next, on page 9 of their motion, the Aamodts state, "the Licensee and the Staff responses made no mention of the testimony of two other BRP employees, William Dornsife, a nuclear engineer and Margaret Reilly, a health physicist, who also

^{6/} Subsequent to Licensee's Response of January 25, 1985, Licensee obtained what is either a retyped copy of the PEMA log or abstracts from that log. This document is attached. It indicates that the BRP informed PEMA at 7:45 a.m. that there was a [projected] offsite release in the direction of Brunner Island and Goldsboro. Subsequent calls from BRP to PEMA were logged at 8:15 and 8:35 a.m. Neither of the abstracts of these calls mentions readings taken at Goldsboro. Licensee is therefore unable to determine with certainty to which of these log entries Mr. Gerusky was referring in his October 1980 interview.

testified, along with Gerusky on May 3, 1979." Licensee, however, found no statements by either of these individuals in the May 3, 1979 interview that were material to the matter raised by the Aamodts. The Aamodts themselves only refer to a statement by Mr. Dornsife that: "The next notes we have is, about 8:30. . . ." From this, the Aamodts speculate that all the times mentioned in the May 3, 1979 interview were based on notes and therefore accurate, and that no significant information was reported between 8:00 and 8:30. There is, however, no basis for concluding that Gerusky's account of notifications to PEMA was based on notes. The notes to which Gerusky referred were identified by him as the notes of Dornsife, who had been on the phone in contact with the Unit 2 control room, and the note taken by Dornsife at 8:30 referred to his conversation with Gary Miller as to the plant status. The Aamodts further speculate that Mr. Dornsife would not have been able to prepare for a briefing with Lieutenant Governor Scranton without having received confirmation concerning offsite readings (presumably for some reason prior to 8:00 a.m.). Contrary to the Aamodts' speculation, however, Mr. Dornsife told the NRC in an October 1, 1980 interview, that he was not aware of the predicted dose rate at Goldsboro until later in the day, probably after he returned from the Lieutenant Governor's briefing. NRC Interview of William Dornsife (Oct. 1, 1980) at 25.

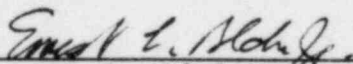

The Aamodts also attempt to obfuscate the Goldsboro issue by referring to statements by Gary Miller and Richard Dubiel, which evidence uncertainty as to when and how the offsite monitoring teams were dispatched to Goldsboro. Aamodts' Reply at 10-12. These statements are recounted at pages 6-11 of Attachment B to the Aamodts' Reply and have little relevance to what information was passed to the BRP prior to 8:00 a.m.

Finally, the Aamodts ignore the gravamen of Licensee's response -- that Licensee's reporting of information concerning the projected dose rate at Goldsboro is a matter that was raised and explored years ago. There is no significant new evidence that would support a motion to reopen.

For all of the reasons above, Licensee submits that both the Aamodts' "Motions to Address False Statements in Response to Aamodt Motion of January 15, 1985" and the Aamodts' "Motion for Reconsideration of Commission Order CLI-84-22 and Opening of a Hearing" should be denied.

Respectfully submitted,

SHAW, PITTMAN, POTTS & TROWBRIDGE

Ernest L. Blake, Jr., P.C.
David R. Lewis
