ADMINISTRATION CONTROL

6.15 ENVIRONMENTAL QUALIFICATION

By no later than December 1, 1980, complete and auditable records must be available and maintained at a central location which describe the environmental qualification method used for all safety-related electrical equipment in sufficient detail to document the degree of compliance with the DOR Guidelines or NUREG-0588. Thereafter, such records should be updated and maintained current as equipment is replaced, further tested, or otherwise further qualified.

EDWIN I. HATCH NUCLEAR PLANT UNITS 1, 2
REQUEST FOR TECHNICAL SPECIFICATION CHANGES
TO ACCOMMODATE NRC RULEMAKING

As required by 10 CFR 50.92, a significant hazards evaluation for the proposed change to the Plant Hatch Units 1 and 2 Technical Specifications is presented below:

Delete subsection 6.15.1.

BASIS:

The requirement for completion of environmental qualification of electrical equipment by June 30, 1982 contained in this subsection was suspended by 10 CFR 50.49 which was issued on that same date. Therefore, this change is consistent with item (vii) of the "Examples of Amendments That Are Considered Not Likely To Involve Significant Hazards Considerations" listed on page 14870 of April 6, 1983 issue of the Federal Register, in that it is proposed to make the operating license conform with changes in the regulations and it would have minimal effect on facility operations.
