ENCLOSURE 2

Vogtle Electric Generating Plant Fitness For Duty Program Summary

The data generated under the Fitness For Duty (FFD) program from July 1995 through December 1995 has been reviewed and analyzed

The random pool contains not only those badges for unescorted access, but also those employees who may, in an emergency condition, be called upon to work at the site and may require unescorted access. Contractors without approved programs are included in the testing pool while on site. Testing during this time period was performed on a nominal weekly basis to include swing shifts, weekends, and holidays. During this testing period, the rate of testing was equal to 50% yearly of the total population.

In summarizing management actions associated with the FFD program, it should be emphasized that the incidents of confirming positive tests were very low. Consequently, management actions relative to determination of FFD have been limited. Contractor employees screened as positive are denied access and no further action is taken.

Management actions taken on licensee employees during this six month period included two individuals who tested positive for marijuana. Both of the individuals were referred to the Employee Assistance Program and underwent rehabilitation. Both of these individuals were released to return to work after the beginning of 1996.

Monthly quality control checks of the Fitness for Duty random pool revealed no major discrepancies.
