Washington, D.C. 20555

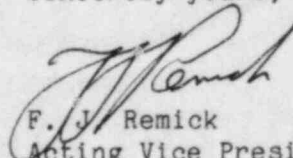

Re: Facility License CDW (R-2)  
Docket No. 50-5

Gentlemen:

In accordance with section 59(b) of 10 CFR 50, The Pennsylvania State University Breazeale Nuclear Reactor reports certain minor changes made to the facility's Emergency Preparedness Plan during the calendar year 1984.

The Emergency Preparedness Plan now incorporates all changes submitted with our April 18, 1984 letter to Cecil O. Thomas, NRC Division of Licensing and approved in his June 1, 1984 letter to this office. Minor changes have been made to the original text. Most of these changes are minor editorial changes and corrections to typographical errors made to improve the clarity of the plan. A minor change has been made to the calibration frequency for reactor and health physics instrumentation as set forth in Section 8.5 Inventory. The calibration frequency is now performed annually instead of every six months; the annual calibration is consistent with our Technical Specifications.

Sincerely yours,

F. J. Remick  
Acting Vice President for Research  
and Graduate Studies
