Subject: Change to Commitment Regarding Technical Review of
Procedures

Gentlemen:

In Toledo Edison (TE) Licensee Event Report Number 86-004, Revision 1, and TE's response to Nuclear Regulatory Commission Inspection Report Number 85-039004 dated August 14, 1986 (Serial Number 1-646), TE committed to establish a Systems Engineer group to provide engineering expertise, at the system level, in support of Davis-Besse Nuclear Power Station (DBNPS). One of the responsibilities of this group is to provide enhanced technical review of surveillance, testing, and maintenance procedures to ensure systems were properly tested and maintained.

However, since this commitment was made, the DBNPS organization structure has changed in such a way that the "system experts" are not always assigned to Systems Engineer group. For example, the "system experts" for fuel handling systems are assigned to the Nuclear Engineering group and the "system experts" for the various cranes at DBNPS are assigned to Maintenance Engineering. Therefore, Toledo Edison is revising this commitment to require the aforementioned procedure reviews be conducted by the responsible system engineer, with the understanding that this individual may or may not be assigned to the System Engineering group.
