G. Laurie

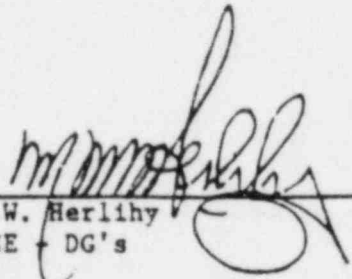

TDI DIESEL GENERATOR RUN HISTORY
Shoreham Nuclear Power Station - Unit No. 1
W.O. No. 44430/48923

As per your request for the operating history of the TDI engines since replacement of the heads the following information is offered:

As of July 29, 1984 total hours, and hours at, or greater than 100% power since crankshaft replacement is as follows:

	<u>101</u>	<u>102</u>	<u>103</u>
Total Hours	552 hrs. 0 min.	496 hrs. 36 min.	567 hrs. 54 min.
Hours 100% or greater	204 hrs. 46 min.	163 hrs. 26 min.	152 hrs. 15 min.

The above noted hours coincide verly closely with the hours on each engine following head replacement. My estimate for the amount of hours on each engine is no greater than 8 hours on each engine between replacement of the heads and replacement of the crankshafts.
