MONTHLY DEFUELING OPERATIONS REPORT

NO. 220

May, 1992

This report contains the highlights of the Fort St. Vrain, Unit No. 1, activities operated under the provisions of the Nuclear Regulatory Commission Operating License No. DPR-34. This report is for the month of May, 1992.

1.0 NARRATIVE SUMMARY OF OPERATING EXPERIENCE AND MAJOR SAFETY RELATED MAINTENANCE

The reactor remained shutdown the entire month of May, 1992, following Public Service Company of Colorado's decision to end nuclear operation at Fort St. Vrain.

During the month of May, 1992, sixty-six loads (396 fuel elements) were deposited in the Fort St. Vrain Independent Spent Fuel Storage Installation (ISFSI).

On May 11, 1992, at 1055 hours, the 1st fuel element was removed from the Prestressed Concrete Reactor Vessel.

On June 10, 1992, the final load of spent fuel was transferred to the Fort St. Vrain ISFSI.

On June 5, 1992, Amendment No. 84 to the Fort St. Vrain Technical Specifications was issued. This amendment deleted the requirement to submit a Monthly Operations Report. Therefore, this is the final Monthly Defueling Operations Report for Fort St. Vrain.

REFUELING INFORMATION

1. Name of Facility	Fort St. Vrain Unit No. 1
2. Scheduled date for next refueling shutdown.	None, no further refueling at FSV is expected.
3. Scheduled date for restart following refueling.	N/A
4. Will refueling or resumption of operation thereafter require a technical specification change or other license amendment?	N/A
If answer is yes, what, in general, will these be?	-----
If answer is no, has the reload fuel design and core configuration been reviewed by your Plant Safety Review Committee to determine whether any unreviewed safety questions are associated with the core reload (Reference 10 CFR Section 50.59)?	N/A
If no such review has taken place, when is it scheduled?	N/A
5. Scheduled date(s) for submitting proposed licensing action and supporting information.	-----
6. Important licensing considerations associated with refueling, e.g., new or different fuel design or supplier, unreviewed design or performance analysis methods, significant changes in fuel design, new operating procedures.	-----
7. The number of fuel assemblies (a) in the core and (b) in the spent fuel storage pool.	a) 0 HTGR fuel elements b) 120 HTGR fuel elements

REFUELING INFORMATION (CONTINUED)

8. The present licensed spent fuel pool storage capacity and the size of any increase in licensed storage capacity that has been requested or is planned, in number of fuel assemblies.	Onsite capacity is limited in size to about one-third of core, 504 HTGR elements. Construction of an Independent Spent Fuel Storage Installation (ISFSI) with a capacity of 1620 FSV HTGR elements has been completed and the facility has been licensed by the NRC.*
9. The projected date of the last refueling that can be discharged to the spent fuel pool assuming the present licensed capacity.	No further refueling is anticipated at Fort St. Vrain. **

* The Independent Spent Fuel Storage Installation (ISFSI), which is presently undergoing fuel loading, will be capable of storing the entire FSV core (1482 HTGR fuel elements) with storage space for an additional 138 HTGR fuel elements.

** Under Agreements AT(04-3)-633 and DE-SC07-79ID01370 between Public Service Company of Colorado, General Atomic Company, and DOE, spent fuel discharged during the defueling process will be stored by DOE at the Idaho Chemical Processing Plant. The storage capacity is presently limited to eight fuel segments. It is estimated that the eighth fuel segment will be discharged in 1992. Discussions concerning the disposition of ninth fuel segment are in progress with DOE. Nuclear Operations at Fort St. Vrain were terminated August 29, 1989.
