Gentlemen:

ULNRC-03349

CALLAWAY PLANT
DOCKET NUMBER 50-483
REVISION TO TECHNICAL SPECIFICATIONS
3/4.6 - CONTAINMENT SYSTEMS and
6.8 - PROCEDURES AND PROGRAMS

Reference: ULNRC-3326 dated February 9, 1996

Union Electric Company herewith transmits a supplement to the application for amendment to Facility Operating License Number NPF-30 for Callaway Plant transmitted by the referenced letter. This information is submitted in response to discussions with the NRC Project Manager for Callaway Plant and supersedes the referenced letter. This letter provides additional proposed changes to Technical Specifications and their associated Bases to directly reference Regulatory Guide 1.163 as required by 10 CFR 50, Appendix J, Option B for the Type A containment integrated leak rate tests and the Type B and C local leak rate tests.

Implementation of the Containment Integrated Leakage Rate Program would allow the integrated leak rate test, presently scheduled for Refuel 8, to be rescheduled. The criterion established by Appendix J, Option B, requires only one integrated leak rate test in 10 years and is presently satisfied by past integrated leak rate testing. Therefore, Union Electric will perform the next integrated leak rate test during Refuel 10 which is currently scheduled for the fall of 1999.

This license amendment request is submitted in parallel with three other similar license amendment

010020

ADD 11

requests from Pacific Gas and Electric Company, Texas Utilities Electric and Wolf Creek Nuclear Operating Corporation. The license amendment requests are submitted in parallel to allow the NRC to review all four changes together and thereby reduce the NRC resources required.

The Callaway Plant On-Site Review Committee and the Nuclear Safety Review Board have reviewed and approved the safety evaluation for this amendment request. Attachments 1 through 5 provide the Technical Specification changes, Safety Evaluation, Significant Hazards Evaluation, and Environmental Consideration, respectively. We have concluded that this amendment application does not involve an unreviewed safety question as defined in 10 CFR 50.59, nor a significant hazard consideration as determined per 10 CFR 50.92.

It is requested that this amendment be approved by August 1, 1996, to be effective on the date of issuance and to be implemented within 30 days of the date of issuance. If you have any questions concerning this amendment application, please contact us.

Very truly yours,

Donald F. Schnell
