

Docket No. 50-346

License No. NPF-3

Serial No. 1120

January 31, 1985

RICHARD P. CROUSE
Vice President
Nuclear
(419) 259-5221

Director of Nuclear Reactor Regulation
Attention: Mr. John F. Stolz
Operating Reactor Branch No. 4
Division of Licensing
United States Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Stolz:

On December 17, 1982, the Nuclear Regulatory Commission (NRC) issued Supplement 1 to NUREG 0737 "Requirements for Emergency Response Capability" (Generic Letter 82-33) (Log No. 1168).

On June 28, 1984 (Serial No. 1059), Toledo Edison submitted a report describing how we meet the requirements of Regulatory Guide 1.97, "Instrumentation for Light-Water-Cooled Nuclear Power Plants to Assess Plant and Environs Conditions During and Following an Accident".

Additionally, Toledo Edison committed to provide a proposed schedule for implementation in accordance with Commission Order dated February 21, 1984, as revised June 5, 1984 (Log No. 1527).

In the June 28, 1984 report, Toledo Edison determined that the Neutron Flux System would require modifications to meet the Category 1 requirements of Regulatory Guide 1.97. This modification has been processed through our Integrated Living Schedule Program (ILSP), with an implementation to be completed at the end of the sixth refueling outage.

Toledo Edison letter of October 30, 1984 (Serial 1092), identified the implementation activity for modification to the Neutron Flux System (Project 355) to be completed by the end of the sixth refueling outage.

Very truly yours,

RPC:SGW:nlf
