March 25, 1996

The Honorable Shirley Jackson  
Chairman  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555-0001

Dear Chairman Jackson:

We need your help. I own a home approximately 4 to 5 miles from San Onofre Nuclear Generating Station (SONGS). With the revelations in the March 4, 1996, issue of TIME magazine we request that the Nuclear Regulatory Commission require SONGS to immediately construct a leak proof containment around all spent fuel storage facilities on site to the same technical specifications as the original Unit 1 and Units 2/3 primary containments. Further it is requested that all spent fuel production on site be terminated to insure the health and safety of the residence of south Orange County and north San Diego County. This request results from the fact that we have obtained documents showing that there have been leaks from the spent fuel pool at SONGS and on at least one occasion the beach has been contaminated with radioactive material. We can only wonder as to what leaks and contamination information and evidence is being withheld from the public.

Sincerely,

*Glen R. Mills*
