Docket Nos. 50-277
50-278

U.S. Nuclear Regulatory Commission
Document Control Desk
Washington, DC 20555

SUBJECT: Peach Bottom Atomic Power Station 1991 Occupational
Exposure Report - Revision to February 28, 1992
Submittal

Attached is the Peach Bottom Atomic Power Station 1991 Occupational Exposure Report. This revised submittal is to correct a data transcription error on the 1988 Recorded Annual Whole Body Exposure Table which was included with the 1991 report. The note at the bottom of the page indicated that the total actual TLD dose for 1988 was 2436.425 Rem. This should have read 2327.151 Rem. This table along with the similar 1989 and 1990 tables were submitted with the 1991 report to add the actual TLD dose notation to these tables. This allows your staff to use the actual site dose value in lieu of a calculated value in NUREG-0713. This is important to us since our insurance company uses the data in the NUREG for insurance premium purposes.

Attached is the 1991 Occupational Exposure Report along with the 1988, 1989, and 1990 exposure tables indicating the actual TLD dose rates of 2327.151, 728.029 and 376.87 Rem respectively. If you have any questions, please contact Dave Foss at (717) 456-3013.

Sincerely,

K.P. Foss
