Subject: License Amendment Application to Revise Technical
Specification 5.3.1, Design Features, Reactor Core, Fuel Assemblies

Gentlemen:

Enclosed is an application for an amendment to the Davis-Besse Nuclear Power Station (DBNPS) Unit Number 1 Operating License Number NPF-3, Appendix A, Technical Specifications (TS) to reflect the changes attached. The proposed changes involve TS 5.3.1, Design Features, Reactor Core, Fuel Assemblies.

This request proposes that TS 5.3.1 be revised to make the description of the design features of fuel assemblies more consistent with the model TS wording as recommended by Supplement 1 to Generic Letter (GL) 90-02, "Alternative Requirements for Fuel Assemblies in the Design Features Section of Technical Specifications", dated July 31, 1992. The model TS wording in the Supplement to GL 90-02 is, furthermore, also reflected in the Standard Technical Specifications for Babcock and Wilcox type plants, as recently issued by the NRC (NUREG-1430).

These changes are required in support of the upcoming eighth refueling outage (SRFO). Therefore, Toledo Edison requests that this amendment be issued by the NRC by March 1, 1993, the currently scheduled commencement date for SRFO.
