Attention: Document Control Desk

Subject: Catawba Nuclear Station
Docket Numbers 50-413 and -414
Revisions to Technical Specification Listings of Core
Operating Limit Methodologies

Attached are proposed revisions to Technical Specification 6.9.1.9 for Catawba Nuclear Station which will reference updated or recently approved methodologies used to calculate cycle-specific limits contained in the Core Operating Limits Report (COLR). All of the new references have been reviewed and approved by the NRC staff; therefore, these changes are considered administrative in nature.

The marked-up Technical Specification pages (as well as revised originals) are contained in Attachment I. The justification and safety analysis, as well as a statement of No Significant Hazards, are contained in Attachment II.

By copy of this letter, the State of South Carolina is being notified of this proposed change.

These proposed changes have been reviewed by the station's Plant Operations Review Committee and the corporate Nuclear Safety Review Board.

If there are any questions, or more information is needed, please call Scott Gewehr at (704) 382-7581.

Very truly yours,

M. S. Tuckman
