

92 NOV -2 A8:58

SECRETARY
DOCKET NO. 72
FRAN

To the Secretary of the Commission.

President opposed to dry cask storage of
nuclear waste at Palisades nuclear power plant.
General public notification or input we have been
sited to a high-level waste dump, 150 yds. from Lake
Michigan 1/5 the world's fresh water. This deadly waste
cannot be stored safely anywhere, so we will most likely be
a permanent regional dump. NO! The D.O.E. has stated they
will not be liable for these wastes if an interim site is
not built by 1998, a date the Government Accounting Office
states is unlikely. Therefore I ask for:

1. full democratic process in the crucial decision.
2. full public hearings held in the sited area.
3. an environmental impact statement filed with the EPA and
the State of Michigan.
4. a full cost/benefit analysis be done examining the cost of
nuclear power and examine other sources of energy.
