Washington, DC 20555

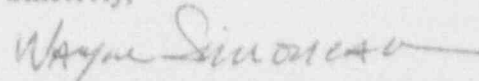

Dear Paul:

After reviewing the Initial/ Requal exam given by you on October 27, 1992 at our facility, one multiple choice question was found to have two possible answers. All other questions/answers were resolved satisfactorily at the exit meeting.

1. Question B 016, this question has two answers. **b. High magnet current reading** and also **d. High conductivity on the delay tank**. ( Ref. Abnormal Procedures ). I suggest that both these answers be accepted.

Your assistance in this matter is appreciated.

Sincerely,

Wayne Simoneau  
Assistant Director  
RI Atomic Energy Commission
