SPENT FUEL SURVEY COMMITMENTS - BNP UFSAR (TAC NO. M95848)

Gentlemen:

The purpose of this letter is to respond to an NRC letter dated July 8, 1996 which requested CP&L to confirm commitments and indicate the projected completion dates for revising the Brunswick Updated Final Safety Analysis Report (UFSAR) to provide:

1. clarification that a full core off-load is a normal evolution during refueling outages,
2. a description of procedural requirements that place the residual heat removal system in service (in the supplemental SFP cooling mode) as necessary to maintain the SFP temperature under 150° F, and
3. a description of the design of the temporary supplemental spent fuel pool cooling system (TSSFPCS).

This information will be provided in the next revision to the Brunswick UFSAR which is currently scheduled to be submitted to NRC no later than April, 1997.

Please refer any questions regarding this submittal to Mr. Mark Turkal at (910) 457-3066.

Sincerely,

William Levis
Director - Site Operations

LIST OF REGULATORY COMMITMENTS

The following table identifies those actions committed to by Carolina Power & Light Company in this document. Any other actions discussed in the submittal represent intended or planned actions by Carolina Power & Light Company. They are described to the NRC for the NRC's information and are not regulatory commitments. Please notify the Manager-Regulatory Affairs at the Brunswick Nuclear Plant of any questions regarding this document or any associated regulatory commitments.

Commitment	Committed date or outage
