Gentlemen:

In the Matter of)	Docket Nos. 50-327
Tennessee Valley Authority)	50-328

SEQUOYAH NUCLEAR PLANT (SQN) - TECHNICAL SPECIFICATION (TS) CHANGE 92-14,
"DEPARTURE FROM NUCLEATE BOILING RATIO (DNBR) LIMITS BASES CHANGE"

Enclosed is a requested amendment to the TS bases of SQN Units 1 and 2. The proposed change will delete certain specific parameters and references that pertain to the DNBR limits. This is required to allow the SQN bases to reflect the use of the new Mini-Revised Thermal Design Procedure and will eliminate the need to revise the TSs in the future if other staff-approved thermal design procedures are used.

The proposed TS change is identified in Enclosure 1. The justification for the proposed change is provided in Enclosure 2.

NRC approval must be received before the end of the Unit 1 Cycle 6 (U1C6) refueling outage because this change is directly related to each unit's Cycle 7 reload analysis. The U1C6 refueling outage is scheduled to begin April 2, 1993. A period of 30 days is also requested to implement the TS change.
