Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attention: Ms. E. G. Adensam, Chief
Licensing Branch No. 4

Subject: McGuire Nuclear Station
Docket Nos. 50-369 and 50-370
Technical Specification Amendment,
Administrative Controls

Dear Mr. Denton:

Attached are proposed license amendments to Facility Operating Licenses NPF-9 and NPF-17 for McGuire Nuclear Station Units 1 and 2, respectively.

The proposed changes to the Technical Specifications are concerned primarily with Section 6.0, Administrative Controls, and reportability requirements associated with the revision of the regulatory requirements of 10 CFR 50.72 and 50.73 as presented in Generic Letter 83-43 (dated December 19, 1983).

The proposed changes to the Administrative Controls section of the Technical Specifications are intended to streamline and clarify the existing controls. This proposal seeks to delete corporate organizational charts in Section 6.0 of the Technical Specifications, as this is redundant to Chapter 13 of the McGuire Nuclear Station Final Safety Analysis Report, which is required (by 10 CFR 50.71) to be updated annually. The proposal also seeks to include the Superintendent of Integrated Scheduling in the review and approval process of procedures and events. Also included in this proposal is a change to base QA record retention on ANSI N45-2.9-1974, as recommended by Regulatory Guide 1.88; a rewording of Section 6.12, High Radiation Areas, to clarify requirements; a change that would allow the Station Services Superintendent to review and approve modifications to the Station Security Program and associated procedures; to update the solid waste reporting requirements (Specification 6.9.1.7) to make these requirements consistent with 10 CFR part 61; and to correct an error in Table 4.11-1 where the word "inlet" was inadvertently substituted for "outlet". The proposed changes to Specification 6.9.1.7 and Table 4.11-1 were recommended by an in-house QA audit. These proposed changes are purely administrative in nature.

Also included in this submittal are several proposed changes to remove inconsistencies that were introduced when reporting requirements (per 10 CFR sections 50.72 and 50.73) were changed and Section 6.0 of the McGuire Technical Specifications was accordingly modified. At the time that the Administrative Controls section of the Technical Specifications was changed, references elsewhere in the Specifications to this section were not modified, causing redundancies and meaningless references. This proposal seeks to remedy these inconsistencies and is administrative in nature.

Page 2

Attachment I contains the proposed changes to the Administrative Controls Section and Table 4.11-1. Attachment II contains the proposed changes to the Technical Specifications concerning reporting requirements. Each attachment contains a Justification and Safety Analysis in support of the proposed changes, and an analysis performed in accordance with the Standards contained in 10 CFR 50.92 as required by 10CFR50.91. These analyses conclude that no Significant Hazards Considerations are involved.

This request involves one application for amendment to McGuire's Technical Specifications. Accordingly, pursuant to 10CFR170.21 a check for \$150.00 is enclosed.

Please feel free to contact us if you require any additional information.

Very truly yours,

Hal B. Tucker
