Vogtle Electric Generating Plant Fitness For Duty Program Summary

The data generated under the Fitness For Duty (FFD) program from January 1996 through June 1996 has been reviewed and analyzed

The random pool contains not only those badges for unescorted access, but also those employees who may, in an emergency condition, be called upon to work at the site and may require unescorted access. Contractors without approved programs are included in the testing pool while on site. Testing during this time period was performed on a nominal weekly basis to include swing shifts, weekends, and holidays. During this testing period, the rate of testing was equal to 50% yearly of the total population.

In summarizing management actions associated with the FFD program, it should be emphasized that the incidents of confirming positive tests were very low. Consequently, management actions relative to determination of FFD have been limited. Contractor employees screened as positive are denied access and no further action is taken.

There were no management actions taken on licensee employees during this six month period. Monthly quality control checks of the Fitness for Duty random pool revealed no major discrepancies from January through June.

As a pro-active measure, in April 1996, management instituted an enhancement to the arrest reporting requirement. Employees reporting a substance abuse related arrest will submit to for-cause fitness for duty testing and be referred for Employee Assistance evaluation by a mental health professional to determine if there is a substance abuse or other problem. To date, four licensee employees have been referred for evaluation and underwent either a rehabilitation or educational program.
