ABSTRACT (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines) (16)

The following steam generator tube plugging report is submitted in accordance with Technical Specification 4.4.6.5.a.

One tube in the 1C steam generator has been plugged during the Unit 1 Cycle VI-VII refueling outage. It was determined that the tube exceeded the pluggable limit based on eddy current testing results. The plugging was performed on 4-23-85.

No tubes in the 1A steam generator required plugging. Testing in the 1B steam generator has been deferred due to other work in progress. A subsequent tube plugging report will be submitted if any tubes in the 1B steam generator require plugging.

The complete results of the steam generator tube inservice inspection will be reported in accordance with Technical Specification 4.4.6.5.b.
