Plant Support Branch

Subject: Revisions to the "Security Plan for the Protection of
Reactor Facilities Under License R-33"; September, 1994.

Reference: License R-33, Docket 50-73.

Dear Mr. Murray:

Enclosed are revised pages to the "Security Plan for the Protection of Reactor
Facilities Under License R-33".

These revisions describe a proposed automated access control system for entry
onto the Vallecitos Nuclear Center (VNC) site and reflect changes in VNC
medical coverage and in organization titles. There are no changes in access
control to the actual reactor facilities.

These changes do not result in any decrease in the effectiveness of the
security plan. In fact, the changes in the site access controls will enhance
entry security and personnel accountability. The computer-operated system
with individually coded badges and the requirement for a PIN number for
off-hours entry effectively denies access to unauthorized personnel.

Revised changes are enclosed as Attachment B to this letter. Changes are
marked with a vertical line in the right-hand margin. A brief description of
each change is included in Attachment A.

Any questions or need for further information should be directed to
G. E. Cunningham on (510) 862-4330.
