U. S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, DC 20555

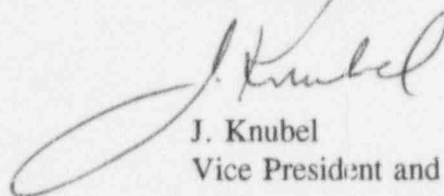

Gentlemen:

Subject: Three Mile Island Nuclear Station, Unit 1 (TMI-1)  
Operating License No. DPR-50  
Docket No. 50-289  
Withdrawal of Technical Specification Change Request No. 214

GPU Nuclear requests that Technical Specification Change Request No. 214 be withdrawn. TSCR No. 214 was submitted on May 13, 1992 to request a change to license condition 2(c)(8)(2) regarding the primary-to-secondary steam generator leakage limits. Since the NRC's development of a steam generator tube integrity rule will affect these limits generically for all plants, we understand that the NRC wishes to defer any permanent increase pending the results of that rulemaking. Therefore, we request that TSCR No. 214 be withdrawn.

Sincerely,

180018

J. Knubel
