Gentlemen:

DOCKET NUMBER 50-483
CALLAWAY PLANT
EMERGENCY TECHNICAL SPECIFICATION CHANGE
TO SURVEILLANCE REQUIREMENT 4.3.1.1 (FUNCTIONAL UNIT 1)
EMERGENCY AMENDMENT NUMBER 73 (TAC NO. M84230)

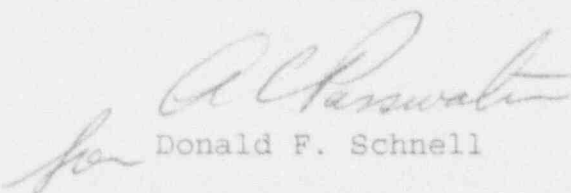

Emergency Amendment No. 73 to the Callaway Plant Facility Operating License No. NPF-30 granted a one time only extension to the surveillance interval for the manual reactor trip switch circuitry. Amendment 73 required complete verification of OPERABILITY of the manual reactor trip switch circuitry be performed prior to startup from the first shutdown to Mode 3 occurring after August 7, 1992.

On September 20, 1992, Callaway Plant experienced a turbine trip/reactor trip due to a component failure concurrent with a weekly preventive maintenance test of the main turbine thrust bearing trip as required by the Turbine Overspeed Protection Program. The surveillance of the manual reactor trip switch circuitry was successfully performed on September 20 to independently verify the OPERABILITY of the Undervoltage and Shunt Trip Attachments of the Reactor Trip Breakers.

The plant entered Mode 2 on September 21 and is currently in Mode 1 at 100% power.

Very truly yours,

050001

for Donald F. Schnell
