REGULATORY GUIDE

Issuance and Availability

The Nuclear Regulatory Commission has issued a guide in its Regulatory Guide Series. This series has been developed to help the public become available to the public. It is acceptable to the NRC staff of implementing specific parts of the Commission's regulations and, in some cases, to delineate techniques used by the staff in evalu-

specific problems or postulated accidents and to provide guidance to applicants concerning certain of the information needed by the staff in its review of applications for permits and licenses.

Regulatory Guide 1.124, Revision 1, "Service Limits and Loading Combinations for Class 1 Linear-Type Component Supports," delineates acceptable levels of service limits and appropriate combinations of loadings associated with normal operation, postulated accidents, and specified seismic events for the design of Class 1 linear-type component supports as defined in subsection NF of section III of the American Society of Mechanical Engineers Boiler and Pressure Vessel Code. This guide applies to light water-cooled reactors. Revision 1 reflects public comment and additional staff review.

Comments and suggestions in connection with (1) items for inclusion in guides currently being developed or (2) improvements in all published guides are encouraged at any time. Comments should be sent to the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Docketing and Service Branch.

Regulatory guides are available for inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. Requests for single copies of issued guides (which may be reproduced) or for placement on an automatic distribution list for single copies of future guides in specific divisions should be made in writing to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Technical Information and Document Control. Telephone requests cannot be accommodated. Regulatory guides are not copyrighted, and Commission approval is not required to reproduce them.

Building, 1717 H Street NW., Washington, D.C. The purposes of this meeting are to continue the review of the final report of the Reactor Safety Study (WASH-1400) and the peer comments thereon, to obtain information on developments in the field of risk assessment methodology and to discuss subjects that might be included in the report of the Review Group.

The Risk Assessment Review Group is an independent group established by the NRC (42 FR 34935) for the purpose of providing advice and information to the Commission regarding the final report of the Reactor Safety Study, WASH-1400 (NUREG-75/014), and the peer comments on the Study, advice and recommendations on developments in the field of risk assessment methodology and courses of action which might be taken on future development and use of risk assessment methodology. This advice and information will assist the Commission in establishing policy regarding the use of risk assessment in the regulatory process. It will also clarify the achievements and limitations of the Reactor Safety Study. The Review Group will submit a report to the Commission on or before July 1, 1978.

In carrying out these assignments, it is anticipated that a number of working sessions will be scheduled at different locations, with notification to the public well in advance of each meeting. With respect to public participation in the meeting, the following requirements shall apply:

(a) Persons wishing to submit written statements regarding the agenda may do so by providing 10 readily reproducible copies to the review Group at the beginning of the meeting. Comments should be limited to areas within the Group's purview. Comments postmarked no later than January 30, 1978, to Dr. John H. Austin, Office of Policy Evaluation, NRC, Washington, D.C. 20555, will normally be received in time to be considered at this meeting. Of course, comments not received in time for this meeting will be circulated to the members of the Review Group for consideration at a future meeting. Comments should pertain to the field of risk assessment methodology or should be based on the final report of the Reactor Safety Study, copies of which are available for public inspection at:
