Secretary of the Commission, Washington, D.C. 20555

Dear Sirs Madam:

In regard to the use of Elicon II at T.M.I., I wish to go on record in opposition to it.

At the time known by knowledgeable

physicists that the thickness in this water cannot be filtered out. The Elicon II system has never been used before and there will stand is not the place to start.

The only real treatment for T.M.I. would be to seal the reactors in concrete towers and never even consider operating them again.

Just as the operators can make this

money so we reason to continue using

this dangerous and possibly fatal means

of generating electricity. How likely is
it that electric power from the power
plant will be used, not even the
P.A. and we are getting along with other
work power since that March 28th
there is no reason to start T.M.I. 1st
restarting again now.

To join the contaminated water
into the ~~purification~~ - to ~~use~~ use
power of drinking water - with a
new feed. new method - would be the
height of insanity.

That ~~from~~ Three Mile Island
before it tells us.

Very truly yours,
(Mrs) Melba Glendon
