

Dear Sir;

I wish you would declare the true real situation on C. N. O. because I feel that the two conditions specified have been met.

1. There was so much radioactivity released that the meters went entirely off scale.

2. There are already numerous lawsuits asking for ten full 500 million dollars in damages.

Your own expert Gibson told five NRC Commissioners on 6/21/79 that you will never know how much radiation was released because the meters went off scale.

It seems to me that this would be reason enough to declare an E. N. O. or at least hold off final judgment until more facts are in.

We as public citizens have suffered an emotional trauma that will take many years to overcome, if we ever will.

Please listen to the public and not to doctors.

Thank you for letting me respond.
