Director of Nuclear Reactor Regulation  
Attention: Mr. G.W. Knighton, Chief  
Licensing Branch No. 3  
Division of Licensing  
U.S. Nuclear Regulatory Commission  
Washington, D.C.

SUBJECT: Waterford Steam Electric Station - Unit Number 3  
Docket No. 50-382  
Operating License NPF-38, Condition 9.g

REFERENCE: Louisiana Power & Light Company letter W3P85-0445 from  
K.W. Cook to G.W. Knighton dated February 22, 1985

Dear Mr. Knighton:

Condition 9.g of the Waterford Steam Electric Station - Unit Number 3 (Waterford 3) Operating License states that a continuous fire watch be maintained at the isolation panel in the relay room on the +35.00 foot level of the Reactor Auxiliary Building from initial criticality until acceptable resolution of adverse effects, if any, of the loss of this panel on safe shutdown. The design and procedural modifications which were to be implemented to resolve these concerns were delineated in the referenced letter. The physical modifications have been completed, and procedure OP-901-056, "Off-Normal Operating Procedure Isolation Panel Fire" has been written and implemented, thereby satisfying the commitments in the referenced letter and the requirements of the subject license condition. Based on discussions regarding the completion of these modifications with both J.H. Wilson and T.A. Flippo, the fire watch was terminated on May 31, 1985. This letter serves as formal notification that the modifications are completed and the fire watch terminated.

Should you have any questions regarding this matter, please contact Robert J. Murillo of our Nuclear Licensing Office at (504) 595-2838.

Very truly yours,

K.W. Cook  
Nuclear Support & Licensing Manager
