

Whom do you believe?

Do we believe the United States government who says that nuclear energy is safe, or do we believe the people who live near these nuclear power plants?

The government says that if we have no nuclear power, the U.S. will lose 13% of our electricity.

We almost had a serious nuclear accident at the Three Mile Island plant in Pennsylvania. If the U.S. government thought that there was no cause for alarm, why did it order the evacuation of thousands of school children and pregnant women living near the plant. If radiation would have gotten out of hand, it would have produced deformed children at birth.

In my opinion, we should continue having nuclear energy because using solar energy, coal, or garbage will not be as effective, and will not be too expensive. Also, nuclear power is still the cheapest method and does not pollute.

supervise the plants more carefully, we
wouldn't have any further accidents
like this.
