Washington, DC 20555

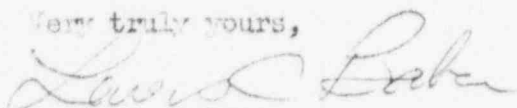

Dear Sirs:

79-19

In response to your bulletin LB Bulletin No. 79-10, "Packaging of Low-level Radioactive Waste for Transport and Disposal", we submit the following:

American Nuclear Products, Material License # 24-16379-02, does not manufacture any radioactive materials and does not generate low-level radioactive waste. Our primary activity in the nuclear field is the repackaging of materials into license-exempt quantities which we distribute under our license 24-16379-01. The total capacity of our license is 160 millicuries for all isotopes from 3-23, and the majority of this activity is in the form of short-lived isotopes such as Phosphorus-32, Iodine-131, Sulfur-35, which if not sold would normally decay into levels acceptable under the disposal of license-exempt quantities regulations.

Very truly yours,

Lewis H. Haber
