

Feb. 11, 1980

To the Secretary of the Commission:

I am a resident of Oldham County, Cristwood, Kentucky, concerned with the building of the Marble Hill Nuclear Plant near Madison Indiana.

Our county has nothing to gain from this nuclear plant, only the hazards surrounding it on a day to day basis as well as possible accidents.

As in the case of Three Mile Island, no one person can foretell that Marble Hill will be completely safe and the dangers involved.

As the U.S. Nuclear Regulatory Commission, I am sure you all are aware of the disastrous construction problems concerning Marble Hill. They are not improving, they are even escalating.

The concerned residents of Oldham County feel these problems of Marble Hill will pose an even higher percentage of accidents than of

acknowledged by card. 2/22/80

Three Mile Island.

The Commission has a proposal pending which states areas surrounding a nuclear plant within a certain radius, must file an evacuation plan before the plant can be issued its working licenses.

Please, as members of the Commission, give us help and support the proposal. We feel it will give us a voice in the future of Marble Hill.

I deeply feel the future of Oldham County and its residents depend upon such a proposal.

Also, please help us by enforcing stronger regulations and closer inspections to help insure our residents' safety. The lax attitudes of Marble Hill have given the public frightening insights for using nuclear power as a safe energy for our country.

Thank you for your time.
