ATTN: Mr. Fredericks N. Dirling
4241 Allendorf Drive
Cincinnati, Ohio 45209

Gentlemen:

This is in reference to your application received April 9, 1979 for the renewal of your Special Nuclear Material License No. SNM-1091, and my recent telephone conversation with Mr. Dirling concerning this renewal.

As discussed with Mr. Dirling, the material submitted in support of your application for renewal of License No. SNM-1091 is incomplete and does not supply enough information for a review of your program for the use of the listed special nuclear material. In review of the recent renewal of License No. 34-00639-01, it appears that the Special Nuclear Material is used and controlled in a manner similar to the materials listed in the byproduct material license. Therefore, rather than resubmitting material already submitted in support of the byproduct material license, we suggest that you give consideration to amending License No. 34-00639-01 to include the 25 grams of plutonium-238 currently licensed under SNM-1091. There would be no change in the present fee structure and no additional fees would be necessary.

From your most recent submission in support of SNM-1091, it would appear that there are a number of changes in your program that need to be reflected in License No. 34-00639-01, including the change in radiation protection officer, new isotopes committee membership, person(s) responsible for training, etc. You should review the material previously submitted for renewal of License No. 34-00639-01 and provide changes so that the information is up-to-date.

If you have questions concerning the matters discussed above, please contact me on (301) 427-4240. In your reply, please reference your Mail Control No. 11110 and provide the information in duplicate.

Sincerely,

Joseph M. Brown, Jr.
