Dear Sir,

I am writing in regards to the existing rules which govern the regulation of nuclear waste transportation. I feel that they are inadequate in terms of the information given to the states.

I believe that the strongest possible rule be considered by the N. R. C.:

- ① Notification should include specific times and routes for spent fuel and low level waste shipments.
- ② Notification should include all low level wastes, with exceptions only for very small quantities of wastes from hospitals or research facilities.
- ③ Notification regulations should in no way restrict the Governor from freely disseminating transportation information to local authorities.

Thank you for your consideration.

Sincerely,
Sara Pennock.
