

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

February 4, 1985

MEMORANDUM FOR: Regional Administrators  
Director, Office of Inspection and  
Enforcement  
Director, Office of the Executive Legal  
Director  
Director, Office of Nuclear Material  
Safety and Safeguards  
NRR Division Directors

FROM: Darrell G. Eisenhut, Director  
Division of Licensing  
Office of Nuclear Reactor Regulation

SUBJECT: OL REVIEW MANAGEMENT REPORT

Enclosed is the OL Review Management Report which reflects the status of the subject plants as of December 1984. All the inputs for this report were reviewed by the applicable DL Project Manager. Therefore, if warranted and the information were readily available, some portions of the report were updated beyond the December 1984 cutoff date. Perry 1 has been added to this report because it is within one year of licensing. The Catawba report has been deleted because a full power license was issued on January 17, 1985.

Two tables have been added to this report. The first gives the licensing schedule for each plant included in this report. The second provides a short description of the major issues affecting each case.

Please provide your markup of this report to me by COB February 14, 1984, the cutoff date for the next report.

TABLE 2

SUMMARY OF MAJOR ISSUES

PLANT

MAJOR ISSUES

Limerick 1

A low power license was issued on October 26, 1984. The plant will be ready to exceed 5% power during the week of February 25, 1985. However, a full power license cannot be issued until a favorable ASLB decision is made on offsite emergency planning, which is currently scheduled for May 1985. Plant operation may also be impacted by the construction completion of the Point Pleasant Diversion Project, which will be used for condenser cooling makeup when the Schuylkill River is not available due to temperature and flow restrictions.

Other Potential Problems

PECo intends to use water from the Delaware River for make-up for condenser cooling evaporative loss when the Schuylkill River is not available based on flow and/or temperature restrictions. Power production would be possible only part of the year without the supplemental water. Construction of the Point Pleasant Station by the local water resource authority, which would divert Delaware River water for several uses, including Limerick, has been delayed by opposition of local county officials. Resolution of this issue involves the two affected counties, local water resources commission (NWRA), as well as the applicant and other governmental agencies. Just recently, on January 5, 1985, a Bucks County Court Judge ruled that the contracts between PECO and the NWRA are valid and enforceable and ordered performance by NWRA to meet the terms of the contracts. Following the possible appeal of this decision, a decision on appeal favorable to PECO, selection of a construction contractor and resumption of construction, it would take about 9 months to complete the project. This would likely place its completion sometime in 1986.

SCALE FOR THE RUM

February 9, 1965.

Dear Friend:-

This past Wednesday night, the Public Utilities Commission held a public hearing at Delaware College, in Doylestown, Pa., to help them decide whether to give the green light to Philadelphia Electric to proceed with the building of Linrick II nuclear plant.

The great preponderance of the opinions was in favor of the completion of Linrick II at the earliest possible time.

Only a few were not in favor of its early completion.

When Linrick II is completed, it will need a coolant, and for many years Bucks and Montgomery counties have planned a pumping station at Mt. Pleasant, Pa., and have invited the Philadelphia Electric Company to be a third party in the building of this new pump. In return, the Philadelphia Electric Company will pick up much of the cost of the new plant, thus making it much easier on the tax payers. Since the Democratic party has gotten control of the Bucks county commission, they have appointed only those that have opposed the completion of the pump, and have wasted the monies that had been accumulated to build the pumping station at Mt. Pleasant, paying out millions of dollars from the fund for things that did not contribute to the completion of the pumping station. A year ago there were 21 million dollars in the water authority treasury to build the pump. Now, a year later, the Bucks county democrats have reduced the treasury to something like 10 million dollars. A great deal of the money has been spent on high priced lawyers, to stop the contracts from being completed, contracts which were already in operation, and which the U. S. Constitution holds inviolate.

The taxes have begun to increase in Bucks county, and during the past year have gone up about eight mills, and the county seat bulletin board has many sheriff's sales posted. There have been re-evaluations of properties upward's in the county, and this is just the beginning. If all those who are against the completion of the pumping station (which is now half done) would resign, and people replace them that are concerned for the good of the county, it would be a mercy of God, just at this time.

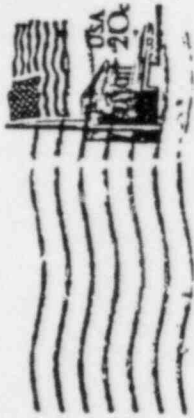

Sincerely, SCALE FOR THE RUM.
