Attention: Ms. Betty Wright

Subject: NRC License XR135, Request for an Amendment

Enclosure: (1) Proposed Changes for NRC License XR135
Amendment 02-03

Nuclear Regulatory Commission (NRC) License XR135 was issued by the NRC on 17 February 1981 to support General Electric's proposal for a new project by Taiwan Power Company and identified as Taiwan Power Nuclear Units 7 and 8. NRC License XR135 was subsequently amended twice, once to increase the estimated value of goods to be exported and again to include Reuter Stokes as another party to the export.

Taiwan Power has recently revised the technical basis for our proposal (increasing plant design power level) and therefore GE needs to change NRC license XR135 to reflect the changed technical plant basis. Enclosure (1) represents the detailed specific changes requested by GE. In summary the Plant Proposal for Lungmen 1 and 2 (formerly Taiwan 7 and 8) calls for an increase plant design level (2894 MWI/984 MWE to 4005 MWT/1356 MWE), an increase in the estimated value of the export (\$900,000,000.00 to \$4,000,000,000.00) and changes in such items as addresses and other parties to the export. GE will be the prime contractor for this project with two major subcontractors, Black and Veatch, and Bechtel Power Corporation.

Black and Veatch have an exclusive agreement for the Black and Veatch Information Management System and may have a separate subcontract role. Another subcontractor will be Bechtel Power Corporation in that they will be our Architect/Engineer, with all construction done through Bechtel.

Your efforts to amending XR135 is greatly appreciated.
