Subject: License Renewal for
Use of Moisture and Density Gauges

Gentlemen:

This letter is being written in order to request a renewal of our license. A copy of our License and Amendment No. 01 are enclosed for your reference. Our license number is 21-18724-01. Also enclosed is a check for the renewal fee of \$120.00.

We are requesting a change in our License Item No. 12 (Page 2 of 3). We are requesting permission to train personnel in-house, as well as training provided by the device manufacturer's training course.

This in-house training program would consist of approximately six (6) hours of review and instruction on safety procedures regarding nomenclature (rem, rads, etc.), shielding and storage of instrument, leak testing, etc. In addition to this, approximately eight (8) hours of field instruction will be provided by personnel previously trained by the manufacturer in the use of the gauges.

After safety and use training, a check test will be given and a passing score of eighty-five percent (85%) will be required or personnel will be retrained. This training will be conducted by Mr. William Bronson (Co-Radiation Officer) who has completed courses given by the Seaman Nuclear Corporation and Troxler Electronic Laboratories, Inc., and who has some ten (10) years experience with equipment use. Training will also be conducted by Mr. John Kalisz who has successfully completed Troxler's training course and has some seven (7) years experience in the field use of the instrument.

The records of personnel who have successfully completed the in-house training course will be kept in our file and available for your use.

We have requested from Troxler that they prepare the test outline, and a copy of this outline will be forwarded to you upon completion.

Very truly yours,

MCDOWELL & ASSOCIATES

A handwritten signature in dark ink, appearing to read 'William Bronson', written in a cursive style.

William Bronson
