Re: Request For Amendment In License

Gentlemen:

In accordance with your request, we are requesting an amend-  
ment to our License. Our License Number is 21-18724-01.

In our original application for the License, Item 15, Para-  
graph 6 states "The gage will be kept at the laboratory  
(designated storage area) when not in use. The gage will  
not be stored at the job site". When not in use, the gage  
has been stored in our laboratory. However, during the peak  
service months, or when individual projects require, the gage  
has been kept in the possession of our field representative.  
This occurs when the need or opportunity for need on a daily  
basis is required. When this need is not present, the gage  
is returned to the laboratory for storage. It is not  
practical for personnel to return the gage to the laboratory  
on a daily basis.

When the gage is in possession of our field representative  
and not in use, the following procedures are required by our  
personnel:

1. The gage is to be kept in the locked position,  
with the lock in place.
2. The gage is to be kept in its storage case.  
This case is identified by labels as to  
radioactive materials, and the types of  
materials are also listed on the case.

3. Each of our vehicles has a separate covered compartment which has a lock. The vehicles are to be kept locked, and the storage compartment is to be kept locked when not in use.

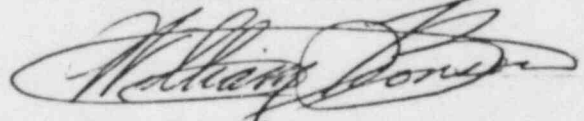

Our personnel have been required to take extreme care of the gage when it is in their possession.

A copy of this letter will be given to each of our personnel to insure that all are informed.

If you have any questions, please feel free to call.

Very truly yours,

McDOWELL & ASSOCIATES
