NO 61 DOCKET NUMBER 63 60 EVENT DATE 74 75 REPORT DATE 80

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

On 3/12/81, a review of Inservice Inspection (ISI) requirements noted a discrepancy between the Plant Modification Manual (PMM) and Technical Specification (TS) 4.0.5. The review further determined that all modifications made on ASME pipe classes dating back through the 1980 refueling outage had been tested not as per TS 4.0.5 but as per the PMM which referenced a later version of the ASME Section XI Code. According to TS 4.0.5, this required prior written relief from the NRC. This relief had not been granted.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

000 NRC endorsement, via Regulatory Guides and 10 CFR 50.55(a) changes, of the 1977
000 Edition through the 1978 summer addenda to the ASME XI Code, was misinterpreted as
000 authorization to invoke that document. Until written NRC authorization is received,
000 future testing will be made in strict compliance to the requirements of TS 4.0.5.
