

DOCKET NUMBER 50-289
PROD. & UTIL. FAC.

3-81

Gen. [unclear] (Undoubtedly)

I am writing to you because
I am furious over the news I
have received that you have
received letters pleading that
you Re Start the Three mile island
Reactor #1. Any one who
knows anything about Nuclear
power and has a Brain
in their head will
know that the
light of the
problems with
Reactor II Re Starting
Unit one would
be sheer Lunacy.
The people who

(over please)

DS03
S
1/0

H
8104230 202

live in terror around TMI
will surely tell you I am right.
In case you haven't heard -
Radiation ^{EXPOSURE} is ~~not~~ conducive to
good health. And how can you
possibly want to make the
TMI site more radioactive
When how to remedy the current
radioactivity leaks and exposures
~~is~~ is still such a mystery.

I cannot believe people can
lack such common sense But
then perhaps they don't have
nuclear power plants where they
live.

I know I am cynical But its
 so difficult not to be when the
 nuclear power plants in my state
 California are ~~located~~ so poorly
 located (earthquake faults) poorly
 constructed (Diablo Canyon) and
 poorly operated. when you have
 had some education about
 Atomic power & weapons the
 Dangers Represented in
 every factor of the industry
 you cannot be in
 favor of nuclear
 If you are in
 favor of life.
 May God guide
 you all in your decision
 (over PLEASE)

And show you how much your
decisions and actions effect the
health and well being of
millions of people world wide
Do not restart TMI #1
Do not license Diablo Canyon!

Yours for a peaceful non-
nuclear future -

Angela Cantrell
Tempe, Calif
