

DOCKET NUMBER
PROD. & UTIL. FAC. 50-289

Mrs. Gary H. Larson
12441 Cross Green Lane
Creve Coeur, Missouri 63141
March 21, 1981

John Aheerne
U.S. Nuclear Reg. Comm.
Wash. D.C.

Dear Sir:

I am imploring you to think very seriously before you go ahead with your plans to restart the No. 1 Unit of the Three Mile Island Nuclear Plant. Nuclear power may be the power of the future, but not before we can devise methods of disposal of nuclear wastes that will be safe and lasting.

H

Nuclear Power has been on the American scene for several decades, and yet, we have failed to conceive of a safe method to rid ourselves of the by-products of this form of energy. In the meantime, we are polluting our air, soil, and water with nuclear wastes and causing untold serious side-effects in our people and the world around us.

It is criminal to continue to build nuclear plants when we cannot take care of emergency accidents; have no effective evacuation plans ready; do not train personnel for all problems, mistakes, and accidents.

2
It is imperative that the
Nuclear Regulatory Commission
must follow all rules and regu-
lations instead of its frequent
policy of ignoring them and doing
as it pleases. Your children's lives
and mine depend on the correction
of this misuse of power!

Nuclear Plants today are time-
bombs. Perhaps after a second
major incident you and the
government will finally realize
that we are not ready for them
and perhaps will never be!

Sincerely,
Eugenia K. Larson
(Mrs. H.H.)
