Reference: Provisional License DPR-21
Docket Number 50-245
Reportable Occurrence RO-81-03/1P

Dear Mr. Grier:

This letter is forwarded to provide prompt notification of Reportable Occurrence RO-81-03/1P as required by the Millstone Unit 1 Technical Specifications.

On April 19, 1981 at 2240 hours it was identified that two containment instrument isolation valves required to be in an open position were in the closed position. These valves are isolation valves for pressure instrumentation associated with Emergency Core Cooling System and Reactor Protection System initiation. Upon further investigation it was also identified that the isolation valve to pressure instrumentation which bypasses certain Reactor Protection System screws at low pressures was also closed. This would have caused a reduction in the degree of redundancy provided by these systems.

A complete inspection of all instrument penetrations and instrument racks has been completed and all valves are in their normal operating position. Additional information including corrective action will be included in a 14-day follow-up report.

Yours truly,

NORTHEAST NUCLEAR ENERGY COMPANY
