Joseph Hendrix
Nuclear Regulatory Commission
Washington, DC

DOCKET NUMBER
PRO-50-275,323

Mr Hendrix,

As chair of The NRC, you are in a key position to stem the encroachment of radioactive wastes into our water, our food chain, and our lives. My father called last Friday to say he's being haunted again by the cancer he got rid of last summer. I am writing because of my concern about him and about Diablo Canyon Nuclear Power Plant.

Public input must be allowed in issues of public safety. In particular, a "Low Power Test" will make Diablo Canyon go radioactive. Emergency evacuation plans are not merely a procedural matter in this case. Public safety is at stake. Three Mile Island safety issues also concern the public.

Please speak out against PG&E's contention that public hearings are not necessary in the advent of a LPT at Diablo.

Sincerely,

Mary Klein
